SUBMISSION TARGETS · CHECKED 1 SEPT 2026

Where this paper can actually go before September closes

Every entry below was checked against its own call for papers today, not pulled from memory. **Two real options survived that check.** Everything ruled out is listed with the reason, so nothing here is a guess dressed up as a lead.

LIVE DEADLINES

24
DAYS LEFT

ICLR 2027

abstract Sep 18 paper Sep 25, 2026 AoE

Broad top-tier ML venue. An empirical robustness audit with a real, documented bug-find and a genuine cross-metric finding fits comfortably in scope. Highly competitive, no anonymization prep needed beyond the standard blind template.

iclr.cc/Conferences/2027/CallForPapers

28
DAYS LEFT

IEEE SaTML 2027

abstract Sep 22 paper Sep 29, 2026 AoE

Directly relevant subject matter, but the CFP explicitly screens for trustworthiness vocabulary threaded through the whole paper, not just stated in the introduction. **Two prerequisites already done** this session: an anonymized copy (double-blind is mandatory) and awareness of the mandatory Open Science section, which still needs writing before submission.

satml.org/call-for-papers

> Both deadlines are Anywhere-on-Earth (UTC-12), the latest possible timezone. That's the actual cutoff, not a buffer.

CHECKED AND RULED OUT

AAAI 2027 (main track)	Deadline was Jul 28, 2026. Already closed.
"Reliable ML from Unreliable Data"	Ran at NeurIPS 2025. Confirmed not on the official NeurIPS 2026 workshop list, despite an aggregator site listing it.
TAI-Eval (NeurIPS 2026 workshop)	Deadline Aug 29, 2026. Already closed, and the fit was partial at best (LLM-evaluation focus, not tabular ML).
Regulatable ML (NeurIPS workshop)	Its own CFP page still shows the 2025 edition. No confirmed 2026 deadline exists.
AISTATS 2027	Deadline Oct 8, 2026. Real, strong fit, just outside September.
CHI 2027	Deadline Sep 10, 2026. Human-computer interaction venue, wrong field for this paper.
IEEE BigData 2026 / ACML 2026	Deadlines Aug 21 and Jul 5, 2026. Both already closed.

If a September deadline isn't the hard requirement, journals with rolling submission are always an option, no cutoff to hit or miss:

`JMLR` `Machine Learning (Springer)` `Data Mining and Knowledge Discovery`

`IEEE TNNLS` `Pattern Recognition`

None of these were checked for topical fit in the same depth as the two conferences above, they're listed as the standard always-open path, not a vetted recommendation.

Compiled 1 September 2026 by checking each venue's own call-for-papers page directly. Countdown figures are calendar days from today to each paper deadline.
